

## Patient Instructions

**Name of Patient: Alice Jenkins**

**age 30**

### **Description of the patient & instructions to simulator:**

You have had a tender warty lesion below your lip for about 4 weeks. If asked for any other matters to be raised you mention a lesion on your right arm which has come off once before but has come back again.

### **PSO**

No family history of skin cancer. Your skin is not prone to burning. "I mean I go abroad every year and I put my sunscreen on and don't burn."

You are a smoker

If asked about quitting: "Well I've tried to be honest about three times, and the last attempt I stopped for six months.....erm, but I went away on holiday and I started again.

I think it was just because I was sitting outside on holiday relaxed and...and been having a glass of wine.

Drinking is not an issue.

If asked for more detail of why you stopped smoking before: "Erm, I was sick of it.....

Because I got a grand daughter, you know she's three.

Not because I thought I was going to die, I just wanted to take her for a walk up Penshaw hill without sort of gasping for breath when you got there.

### **First line and history**

This doctor. That appeared, it's sore like a spot...

...but I've used everything you would use for a spot and I've had it for about four weeks.

And it's, well I changed my face cream and like, a tiny milk spot appeared.

And I just kept sort of bathing it and I don't know if it's a wart or what.

I think it's getting bigger.

I mean it's not on my lip it's just down from it.

**Ideas** – I don't know if it's a wart or what.

Yep. But I didn't think warts were sore.

**Concerns** – No that's it.

If asked again: Well I'm just worried incase it's skin cancer.

**Expectations** – To rule out skin cancer and possibly to have the wart taken off.
